julian-tintarea

Languages

English

Near-native proficiency (C2). Fully comfortable using the language for any professional task.

●●●●●

Romanian

Native proficiency.

●●●●●

Spanish

B2 – C1. Confident in performing most professional and everyday communication tasks.

●●●○○

French

A1 – A2. Basic comprehension; can handle simple, routine communication with support.

●○○○○

Summary

Software Engineer with a solid math/CS background and competitive programming experience. Comfortable across the full stack, from game development to responsive web apps. Quick to master new technologies and design modular, high-performance systems.

Education

University of Craiova — Computer and Software Engineer

Computer Science taught in English — 2026 – Present

https://www.ucv.ro/

Theoretical Highschool „Henri Coandă”

Highschool • 9.80+ All years

Mathematics - Informatics (Computer Science) — 2022 – 2026

https://henricoandacraiova.ro

CPPI (Center of Preparation for Performance in Informatics)

Extracurricular Activity

Informatics (Computer Science) — 2022 – 2023

https://cppi.sync.ro/

Organisational Skills

- Masterful optimization and utilization of resources to complete any given task obtained from working with heavy constraints in my projects (For the Craiova Hackathon we had to train an AI model using an RTX 3050).
- Strong leadership skills garnered from unofficially coordinating my team in events such as the Craiova Hackathon.

Communication Skills

- High proficiency in oratory and general speeches, obtained from repeatedly participating in public speaking competitions in my city and delivering presentations for diverse events (my school's 100th anniversary or the interdisciplinary communication competition within my city).
- Easygoing and friendly nature garnered from working with all types of people throughout my competitions (InfoOltenia team edition, Craiova Hackathon etc).
- Versed in the construction of convincing and persuasive pitches for applications, obtained from always being the speaker at events such as the Craiova Hackathon.

Technological Skills

Lua

Deep understanding of language internals (OPCodes, CLua), object-oriented programming, Luau framework integration (Fusion, Knit, Aero), and custom tooling/library development (Teardrop module manager & core framework for Inked Knight Mystery) from 4+ years of Roblox ecosystem work.

C++

Modern C++ development with strong emphasis on STL, Windows API, memory/resource management (RAII), custom data structures and algorithm implementations, graphics-pipeline and rendering-system work (OpenGL/Vulkan/DX11/12), and practical systems-level experience from engine and database-manager projects.

Javascript

Intermediate to beginner level knowledge: experience with core JS syntax, DOM manipulation, event handling, modifying open-source UI/UX code, and integrating custom interactive features into personal portfolio project.

Python

Intermediate to beginner knowledge of the language with a backend-focused experience developing a Python-based feature-rich Discord bot utilizing clean architecture principles and performance-oriented practices.

CSS, HTML

Advanced knowledge of both languages: developed multiple complete websites using vanilla HTML and CSS, focusing on clean, maintainable markup, responsive design, and consistent styling across projects.

Flutter & Dart

Intermediate to beginner level knowledge: practical front-end development experience using Flutter, strong familiarity with Dart syntax and language features, and working knowledge of core widgets and UI construction patterns (e.g., solo development of the Flutter front-end for the Craiova Hackathon project).

TailwindCSS

Practical experience building responsive, utility-first interfaces, leveraging prior vanilla CSS knowledge; applied extensively in personal portfolio projects.

Vue.js

Beginner level knowledge of Vue.js obtained when building my own Portfolio with this framework and TailwindCSS exclusively, gaining hands-on experience with reactive components and framework basics.

Git / Github

Intemediate level knowledge: practical experience with version control, basic commands, repository structure, and collaborative workflows, applied in the Craiova Hackathon and personal open-source projects.

IDEs / Code Editors

Extensive experience with Visual Studio Code, Visual Studio, Code::Blocks, and JetBrains IDEs, applied across a range of projects including websites, desktop applications, and other software development tasks.

Linux

Intermediate level knowledge: experience managing and deploying Linux servers, including LXC containers, virtual machines on Proxmox, and raw Ubuntu server deployments.

Projects

Inked Knight Mistery March 2025 – Present

Solo-developed multiplayer videogame built on the Roblox platform.

Developed primarily over one summer and currently in active production, with an expected release in late 2025.

Key Technical Contributions:

- **Designed and implemented a lightweight, modular framework** that enables rapid integration of new systems and components.
- **Applied modern programming practices** to ensure the project remains highly optimized, maintainable, and scalable.
- **Achieved high performance comparable to AAA standards** through techniques such as lazy loading, parallel Luau execution, and efficient replication via serialization.
- **Developed and deployed multiple custom libraries in production**, including *Teardrop* (module manager), a custom state manager, a custom animation handler, and additional tooling planned for future open-source release.

https://www.roblox.com/share/g/260210301

My Portfolio September 2025

First edition of my personal portfolio, built to showcase my work and brand.

Developed in one week while learning Vue.js and TailwindCSS, which I adopted for this project.

Key Technical Contributions:

- **Integrated several open-source tools**—including i18n for multilingual support, Swiper.js for project sliders, and Vue Bits for interactive effects—to enhance functionality and interactivity.
- **Delivered a responsive, high-performance user experience** with fast load times, smooth interactions, and a design that remains stylish and consistent across all devices.
- **Applied core UI/UX principles** to craft a clear, engaging user journey that effectively communicates my personal brand.

The Hooty Bot July 2025

Feature-rich, server-deployable Discord bot designed as an all-in-one alternative to major bots on the market.

Key Technical Contributions:

- **Developed a modular and high-performance Python architecture** with 20+ cogs, optimized for near-instant command execution and minimal resource usage.
- **Built a custom permission system** that extends Discord's native model, enabling fine-grained control over features, roles, and user access.
- **Integrated a comprehensive logging system** that captures events from both the bot and individual cogs, improving observability and debugging efficiency.

https://github.com/juinc/Hooty-Bot

Projects

Omni Bank Database Manager March 2025 – April 2025

Desktop application built in C++ using TheCherno's Walnut framework (ImGui + Vulkan).

Originally a terminal-based school project, expanded into a full-featured graphical application.

Key Technical Contributions:

- **Implemented quality-of-life features** including multilingual support, automatic data refresh, autosaving, and configurable user settings.
- **Developed a modular, well-structured, and thoroughly documented codebase** to ensure ease of maintenance, extensibility, and future contribution.
- **Applied intermediate-level C++ concepts**—such as RAII, shared pointers, and STL data structures—to deliver an optimized, stable application with a smooth UI/UX experience.

Awards & Competitions

English Speaking Union 2026

3rd Place National Semifinals Winner

I participated in the public speaking competition organized by the **English Speaking Union Romania**, holding a philosophic yet accessible speech about the **dichotomy of benevolence and malevolence in human psychology**.

https://esu.ro/

Craiova Hackathon October 2025

2nd Place Hackathon Winner

Unofficially led my team at the Craiova Hackathon, where I built a legal-assistant AI app using Flutter. Our team won **2nd place overall**.

https://craiovahackathon.ro/

„Coandă days" Public Speaking Competition June 2024

1st and 2nd Place Winner

Competed in my high school's public speaking contest, earning **2nd place** with a speech on love (June 2024) and **1st place** the following year with a speech on the importance of mental health (June 2025).

InfoCNFB 2022 - 2023 - 2024

4th Place & Participation

Participated for three consecutive years in the InfoCNFB competitions—hosted by the most prestigious college in my city—and achieved **4th place** in my first year in both the Junior and Senior categories.

Informatics Olympiad 2022 - 2023 - 2024

Dolj County

Competed in the county-level Programming Olympiad (9th–11th grade) and ranked in the **top 10** for my grade level in 10th grade.

National Scientific Communication Competition - Highschool level 2025

3rd Place & 4th Place

Achieved **4th place** in the **Physics** section and **3rd place** in the **Geography** section of the competition, producing **well-structured reports** and delivering **persuasive presentations**.

Awards & Competitions

InfoOltenia 2023

4th Place Winner

Competed in the team division of the InfoOltenia competition, where my teammate and I won **4th place overall**.

ITEC 2023

Participation

Participated in the ITEC programming competition in 9th grade, competing in the Data Structures & Algorithms section.

https://itec.ro/

Nextlab 2023

Participation + First Stage Nominee

Advanced to the first stage of the neXtlab robotics competition, where I earned a robotics kit as an award.

https://robo.nextlab.tech/
